1. TO ENSURE AN EFFECTIVE MOLECULAR WELD

METALLIC SURFACES – APPLY ONLY AFTER BLAST CLEANING
a) Brush away any loose contamination and remove dirt, oil, grease, etc., with Belzona® 9111 (Cleaner/Degreaser), or any other effective cleaner which does not leave a residue e.g. methyl ethyl ketone (MEK).
b) Select an abrasive to give the necessary standard of cleanliness and a minimum depth of profile of 3 mils (75 microns). Use only an angular abrasive.
c) Blast clean the metal surface to achieve the following standard of cleanliness:-
ISO 8501-1 SA 2½ – very thorough blast cleaning
American Standard Near White Finish SSPC SP10
Swedish Standard SA2½ SIS 05 5900
d) After blasting, metal surfaces should be coated before any contamination of the surface takes place.

NOTE: SALT CONTAMINATED SURFACES
The soluble salt contamination of the prepared substrate, immediately prior to application, shall be less than 20mg/m² (2μg/cm²).

Metal surfaces that have been immersed for any periods in salt solutions e.g. sea water, should be blasted to the required standard, left for 24 hours to allow the ingrained salts to sweat to the surface, then washed prior to a further blast cleaning.

2. PIT FILLING & STRIPE COATING

Belzona® 1591® – HTS 11 must be used within the times shown:

<table>
<thead>
<tr>
<th>Temperature</th>
<th>Use all material within</th>
</tr>
</thead>
<tbody>
<tr>
<td>68°F (20°C)</td>
<td>40 mins.</td>
</tr>
<tr>
<td>86°F (30°C)</td>
<td>25 mins.</td>
</tr>
<tr>
<td>104°F (40°C)</td>
<td>15 mins.</td>
</tr>
</tbody>
</table>

3. COMBINING THE REACTIVE COMPONENTS FOR HEATED AIRLESS SPRAY

Only commence mixing once the spray equipment has been assembled and thoroughly tested - see “Instructions for spraying Belzona solvent free coatings”.

WORKING LIFE
From the commencement of mixing, Belzona® 1521 must be used within the times shown:

<table>
<thead>
<tr>
<th>Temperature</th>
<th>Use all material within</th>
</tr>
</thead>
<tbody>
<tr>
<td>68°F (20°C)</td>
<td>40 mins.</td>
</tr>
<tr>
<td>86°F (30°C)</td>
<td>25 mins.</td>
</tr>
<tr>
<td>104°F (40°C)</td>
<td>15 mins.</td>
</tr>
</tbody>
</table>

4. APPLYING BELZONA® 1521

FOR BEST RESULTS
Do not apply when:-
i) The substrate temperature is below 41°F (5°C), above 104°F (40°C) or the relative humidity is above 85%.
ii) The substrate temperature is less than 5°F (3°C) above dewpoint.
iii) Rain, snow, fog or mist is present.
iv) There is moisture on the metal surface or is likely to be deposited by subsequent condensation.
v) The working environment is likely to be contaminated by oil or grease from adjacent equipment or from smoke from kerosene heaters.

4.1 EQUIPMENT REQUIRED
Belzona® 1521 must be sprayed using heated airless equipment. Either a single airless pump or plural equipment, capable of metering accurately and mixing the two components, can be used. See “Instructions for spraying Belzona solvent free coatings”.

Mix ratio 9:5:1 by volume
Tip Temperature 104-122°F (40-50°C)
Tip pressure (minimum) 2500 psi (172 bars)
Tip size 17-23 thou (0.43-0.58mm)
Cleaning solvent DO NOT THIN Belzona 9121, MEK or Acetone

4.2 COVERAGE RATES

<table>
<thead>
<tr>
<th>Recommended number of coats</th>
<th>2</th>
<th>1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Target thickness 1st coat</td>
<td>18 mils (450 microns)</td>
<td>30 mils (750 microns)</td>
</tr>
<tr>
<td>Target thickness 2nd coat</td>
<td>14 mils (350 microns)</td>
<td>N/A</td>
</tr>
<tr>
<td>Minimum total DFT</td>
<td>20 mils (500 microns)</td>
<td>20 mils (500 microns)</td>
</tr>
<tr>
<td>Maximum total DFT</td>
<td>40 mils (1000 microns)</td>
<td>40 mils (1000 microns)</td>
</tr>
<tr>
<td>Practical coverage rate 1st coat</td>
<td>21.5 sq.ft (2 m²/litre)</td>
<td>12.9 sq.ft (1.2 m²/litre)</td>
</tr>
<tr>
<td>Practical coverage rate 2nd coat</td>
<td>28 sq.ft (2.6 m²/litre)</td>
<td>N/A</td>
</tr>
<tr>
<td>Theoretical coverage rate to achieve minimum recommended system thickness</td>
<td>21.5 sq.ft (2 m²/litre)</td>
<td>21.5 sq.ft (2 m²/litre)</td>
</tr>
</tbody>
</table>

Actual coverage rates obtained will vary according to equipment choice, application technique, component size and application environment. Interruption to application will significantly increase wastage.

Note
Total system thickness in stripe coat or repair areas should not exceed 80 mils (2000 microns).
4.3 APPLICATION AS A 2 COAT SYSTEM.
Where it is not possible to achieve a uniform coating at the required thickness, the material should be applied as a two coat system. Apply the first coat of Belzona® 1521 at the recommended coverage rate and allow to harden for at least 16 hours.

Before applying a second coat, wash the surface of the Belzona® 1521 with a warm detergent solution to remove any amine bloom that has formed. Rinse with clean water and allow to completely dry. Carefully grit blast to create a frosted surface free from any gloss with a target profile of 40 microns.

Apply the second coat of Belzona® 1521.

4.4 APPLICATION AS A 1 COAT SYSTEM.
Where application conditions permit, Belzona® 1521 may be applied as a single coat at the recommended coverage rate.

NOTE:
Ensure maximum thickness of 40 mils (1000 microns) is not exceeded.

4.5 INSPECTION
a) Immediately after application of each unit, visually inspect for pinholes and misses. Where detected, these should be immediately brushed out.
b) Once the application is complete and the coating has hardened, carry out a thorough visual inspection to confirm freedom from pinholes and misses, and to identify any possible mechanical damage.
c) Spark testing can be carried out to confirm coating continuity. A DC voltage of 2,400 volts is recommended to confirm that a minimum coating thickness of 20 mil (500 microns) has been achieved.

4.6 REPAIRS
Any misses, pinholes or mechanical damage found in the coating should be repaired as follows. Wash the surface of the Belzona® 1521 with a warm detergent solution to remove any amine bloom that has formed. Rinse with clean water and allow to completely dry. Carefully grit blast or abrade to create a frosted surface free from any gloss with a target profile of 1.5 mils (40 microns) before applying further product. Belzona® 1591 may be used for localized repairs.

4.7 CLEANING
Mixing tools should be cleaned immediately after use with Belzona® 9111 or any other effective solvent e.g. MEK or Acetone. Brushes spray equipment and other application tools should be cleaned using a suitable solvent such as MEK or Acetone.

5. COMPLETION OF THE MOLECULAR REACTION
The coating should be allowed to cure as follows:

<table>
<thead>
<tr>
<th>Ambient temperature</th>
<th>Time until inspection</th>
<th>Time until full service</th>
<th>Time until post-cure (if required)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dry</td>
<td>Wet</td>
<td></td>
<td></td>
</tr>
<tr>
<td>41°F (5°C)</td>
<td>48 hrs</td>
<td>6 days</td>
<td>48 hrs</td>
</tr>
<tr>
<td>50°F (10°C)</td>
<td>24 hrs</td>
<td>48 hrs</td>
<td>24 hrs</td>
</tr>
<tr>
<td>68°F (20°C)</td>
<td>6 hrs</td>
<td>18 hrs</td>
<td>6 hrs</td>
</tr>
<tr>
<td>86°F (30°C)</td>
<td>5 hrs</td>
<td>14 hrs</td>
<td>5 hrs</td>
</tr>
<tr>
<td>104°F (40°C)</td>
<td>3 hrs</td>
<td>8 hrs</td>
<td>3 hrs</td>
</tr>
</tbody>
</table>

Post-cure will generally be unnecessary as the coating will cure sufficiently at ambient temperature with full cure achieved in service. However, post-cure may be desirable to facilitate faster cure and quicker return to service (see below).

POST-CURE
If post-cure is desirable, the coating should be heated to between 122°F (50°C) and 212°F (100°C) for a minimum of 1 hour.

The coating should be allowed to cure as detailed in the above table prior to a dry (e.g. hot air) or wet (e.g. steam and liquid media) post-cure. Wet post-cure can typically be achieved during return to service, provided that the temperature ramp rate does not exceed 54°F (30°C) per hour.

If immediate exposure to aggressive media is to occur prior to achieving a ‘full service’ cure, post-cure is recommended. Please contact your Belzona representative to discuss specific requirements.

Coated equipment can be transported after the material has achieved the ‘inspection’ level of cure.

HEALTH & SAFETY INFORMATION
Please read and make sure you understand the relevant Safety Data Sheets.
